## Project Design Phase-I Proposed Solution Template

| Date          | 30 September 2022                                                                                    |  |
|---------------|------------------------------------------------------------------------------------------------------|--|
| Team ID       | PNT2022TMID09656                                                                                     |  |
| Project Name  | Classification of Arrhythmia by Using Deep<br>Learning with 2-D ECG Spectral Image<br>Representation |  |
| Maximum Marks | 2 Marks                                                                                              |  |

## **Proposed Solution Template:**

Project team shall fill the following information in proposed solution template.

| S.No  | Parameter                                | Description                                                                                                   |
|-------|------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 5.110 | Parameter                                | Description                                                                                                   |
| 1.    | Problem Statement (Problem to be solved) | Build an effective electrocardiogram (ECG) arrhythmia classification method using a convolutional neural      |
| 2.    | Idea / Solution description              | network (CNN)  Classify ECG using deep two- dimensional(2-D) CNN with grayscale ECG images                    |
| 3.    | Novelty / Uniqueness                     | When the image is fed into the model, the cited class will be displayed on the webpage                        |
| 4.    | Social Impact / Customer<br>Satisfaction | Using this Method, We can get classification accurate                                                         |
| 5.    | Business Model (Revenue Model)           | Creating a web application where the user selects the image which is to be classified                         |
| 6.    | Scalability of the Solution              | It can classify into seven categories, one being normal and the other six being different types of arrhythmia |
